

EXPERT MASTER 8.6 UIAA

Rope diameter • [mm] **8.6** 50 Weight• [g/m]
Number of UIAA falls 5 9.1 0.3 4.3 30 0.9 Max. impact force • [kN] Sheath slippage • [%] Static elongation • [%] Dynamic elongation • [%] Knotability

The thinnest single rope we offer. The low

weight, which is only 50 g, makes it an ideal weapon, which will help you to send your hardest projects.

MASTER 8.9 EXPERT UIAA 1 10 00 Rope diameter • [mm] Weight• [g/m] Number of UIAA falls 8.9 8.9 8.9 Max. impact force • [kN] Sheath slippage • [%] Static elongation • [%] 6.4 10.3 0.7 0.4 10.5 0 0 0 6.9 6.9 6.9 Dynamic elongation • [%] 0.8 | 0.8 | 0.8

Another aggressive rope with impregnation for hard climbing projects. Certified for use as a single, twin and half rope.

If you want to have a lightweight rope for sport climbing and if you would like to use it occasionally in the mountains also. Master 9.0 is a good choice. In addition, this rope makes use of the TeFIX® technology which increases resistance and prolongs the lifespan of the rope thanks to the connection of the core and the sheath.

This rope defeats the stigma that thin ropes aren't durable. You don't need to carry one rope for practicing and another one for redocint. Innovated, extremely fine SBS sheath significantly prolongs its lifespan. The rope is at the same time soft enough and easy to work with.

Master PRO 9.7 is unique thanks to its construction of the braid SBS, which guarantees good resistance and lifespan of the rope. It is perfect choice for those who prefer durability and long lifespan insteadof weight. This group also includes high performance climbers during their projects practising

Knotability

ADVANCED W WIAA Rope diameter • [mm] 10.2 Weight • [g/m] Number of UIAA falls 67 11 8.3 Max. impact force • [kN] Sheath slippage • [%] Static elongation • [%] 0 6.9 33 Dynamic elongation • [%]

An new version of a robust rope AMBITION 10.2 enriched with TeFIX® technology. The fact that the core is connected with the sheath prevents the sheath from shifting and provides maximum possible safety in case of the sheath damage. An ideal rope which will guide you through many vertical miles.

0.8

A rope with SECURE technology that offers less UIAA falls but has much larger sheath that ensures durability and a long lifespan of the rope Perfect choice for rentals and permanent use in the climbing gyms (top-roping).

A rope with braided core developed especially for top-rope climbing at gyms. Suitable for climbing schools and rentals

A rope has a braided core, developed especially for top-rope climbing at gyms. Suitable for climbing schools and rentals

AMBITION 10.0 is designed especially for beginners. Wider diameter combined with SBS sheath offers an impressive performance and long lifespan.

MOUNTAINEERING AND ALPINISM

The lightest twin rone in the world Only 34 grams per meter and still perfectly safe. Ideal for extreme climbing projects or as an ultra-light rope for ski-tourists. You wončt even notice this rope in your bag due to its weight and size. Certified for use as a twin rope exclusively.

MASTER 7.8 TEFIX® EXPERT W UIAA Rope diameter • [mm] **7.8** 39 7.8 39 16 Weight • [g/m] Number of UIAA falls 5.4 8.3 0 0 11.3 7.1 Max. impact force • [kN] Sheath slippage • [%] Static elongation • [%] Dynamic elongation • [%] 36 0.9 0.9

The TeFIX® technology is also in our lightest ropes for climbing in the mountains. Where else is there a need for good resistance and lifespan of the ropes than in the mountains? Master 7.8 TeFIX®, besides low weight, profits also from better resistances.

An ideal choice for various activities in the mountains. Mountain guides, ski-tourists as well as mountaineers will love its low weight of 39 g. We offer this rope even in short variants of 20 and 30 m.

The thinnest single rope we offer. The low weight. which is only 50 g, makes it an ideal weapon, which will help you to send your hardest projects.

A light weight quality rope, for those who feel at home in the mountains. The Complete Shield technology protects the rope from water and dirt. You can choose from four distinct colour patterns.

BIGWALL

MASTER 9.7 TEFIX® EXPERT SBS UIAA Rope diameter • [mm] Weight• [g/m] Number of UIAA falls Max_impact force • [kN] 8.2 Sheath slippage • [%] Static elongation • [%] Dynamic elongation • [%] 0.8

For big walls you need a rope, which you can rely on. Even when you damage a sheath in one part, you don't have to be afraid. TeFIX® technology connects the sheath with a core so that you can nass the damaged part and reach safety That's not what an ordinary rope would offer you.

HATTRICK 9.7

ADVANCED

If you prefer small diameters but you don't want to underestimate the safety, there is no better option than Hattrick 9.7 or Master TeFIX® 9.7. SBS construction of the sheath together with a SECURE technology make this rope safe, long-lasting and prevents the sheath from shifting.

LOWE 9.7 ADVANCED UIAA Rope diameter • [mm] **9.7** 55 Weight• [g/m] Number of UIAA falls 6 8.6 -0.15 7.4 Max_impact force • [kN] Sheath slippage • [%] Static elongation • [%] Dynamic elongation • [%] 32

Our unique technology lowers the weight of the rope keeping the ideal diameter. An excellent choice for all sport climbing areas.

10.2 67 11 8.3 Max. impact force • [kN] Sheath slippage • [%] 0 6.9 33 0.8 Static elongation • [%] Dynamic elongation • [%] Knotability

The most robust and safest rope for big walls from our catalogue. TeFIX® technology holds the core and the sheath firmly together so that in case of emergency you can use the rope even when the sheath is rinned

The massive sheath of this rope ensures safety and a long lifespan. As other ropes for big wall climbing. this one offers SECURE technology for your security.

MASTER 9.7 TEFIX® EXPERT SBS UIAA Rope diameter • [mm] 9.7 Weight• [g/m]
Number of UIAA falls Max_impact force • [kN] 8.2 Sheath slippage • [%] Static elongation • [% Dynamic elongation • [%] 35 Knotability

Technologies keep advancing. Favorite MASTER 9.7 with TeFIX® technology became even more safer and durable than its older brother. Permanent connection of a core and sheath ensures that the sheath cannot slip. Check the fresh design!

MASTER 9.4 SBS UIAA Rope diameter • [mm] Weight• [g/m] Number of UIAA falls 6 7.1 Max_impact force • [kN] Sheath slippage • [%] Static elongation • [%] 6.2 Dynamic elongation • [%] Knotability

MASTER 9.4 with a small diameter but durable SBS sheath construction. Ideal for average climbers who want to keep pushing their limits.

One of the most favorite ropes among our customers MASTER 9.7 is time-proven - it offers an ideal diameter, SBS sheath and a long lifespan.

SALAMANDER_The best choice among the canyoning ropes. Light, floating rope with our SECURE technology keeps its outstanding qualities for a long time. Its construction and applied materials help to minimize shrinking of the rope in wet conditions. It has stronger, coarser sheath and thanks to the production technology, this rope is minimally dynamic

SPELEO_Low stretch, high static strength, and exceptional resistance to abrasion are the qualities most valued among cavers. Polyester sheath is built to endure higher thermal stress

CANYON DRY_New polyamide rope with a smaller diameter of 9 mm it has a teflon finish in comparison with the other types, which increases its water and abrasion resistance considerably. The highly visible colour guarantees that the user has under control any situation where bad conditions prevail. The rope is flexible and retains its softness even after a long period of use. CANYON DRY 9.0 will be appreciated especially by experienced canyoneers who strive for a quick and smooth advancement above all and who care about every gram of weight.

CANYON GRANDE_This rope is easily knotted and soft even after repeated immersion into the water. Its bright colours contrast well with the colour of the water, it is highly resistant to abrasion and offers increased water-resistance. Thanks to the materials used, the rope has lower absorbability and floats on the surface

Canyon WET_Rope variation which doesn't float on water due to materials used (PA) meets requirement of EN 1891 type A.

LOWERING ROPE 15

Diameter • [mm] Weight • [q/m] Number of falls (min.) Relative mass of sheath • [%] Sheath slippage • [mm] Elongation (50 - 150 kg) • [%] Shrinkage • [%] Tenacity • [kN] Min. tenacity with knots . [kN] Used material Type

Lowering rope 15 mm of a new construction with increased strength and reduced diameter. Very good handling during lowering and braking of loads.

SEWN TERMINATION

PA B

SECURE 10.5 / SECURE 11

A rope for any application where the sheath and the core may suffer damage. When using this rope you will significantly increase your safety margins, in cases where mechanical damage to the rope due to sharp edges or falling objects. Thanks to the unique sandwich-type construction of braided layers and the use of specially developed staple fibers, the rope is able to hold the suspended person or load even in the event of considerable sheath or core damage. Even if the rope is heavily damaged, the suspended person has enough time to abseil to the ground or to a safe anchor point.

PROTECTED BY UTILITY MODEL. / SEWN TERMINATION IS AVAILABLE ON REQUEST.

STATIC 9 TYPE A

Thanks to the unique construction and the state-of-theart technological finishing, the static rope offers a strength higher than 22 kN with a falling mass of 100 kg (in comparison with the standard falling mass of 80 kg for type B ropes). The

strength of the rope with knots exceeds 15 kN for a period of 3 minutes without any damage to the core and the sheath (type B ropes are tested for 12 kN for a period of 3 minutes). This is an advantage which workers working at heights and rescue teams are eager for, because having a stronger rope in critical situations with full outfit and gear brings them to a higher standard.

A unique rope with aramid sheath and polyamide core, which features high firmness and increased resistance to cutting and abrasion. The rope is resistant to naked flame and radiant heat of up to 400 °C for short periods of time! This characteristic will be appreciated in particular by special police and army emergency squads for quick descent from a helicopter, when ordinary ropes are not able to tackle the heat energy.

* Tested according to EN 1891 type b excepted material, marking and falls. ** Tested according to EN 1891 type a excepted material, marking and falls.

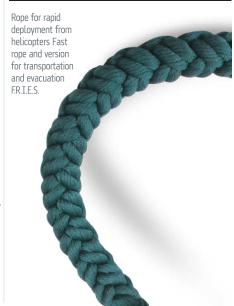

A special rope which makes use of a technology of combination of materials and the rope construction itself. There is internal sheath made of stainless steel wires in the rope. The product for use in extremely severe conditions (for instance rescuers, firemen. nolicemen and other special forces) due to its increased resistance to cutting.

The newly developed rope with reflection control weaving reflects a beam of direct light making it easier to identify the rope in the dark and in poor lighting conditions. The rope is particularly useful for rescue work, speleology, diving and as a tracing rope for mines.
